衷心感谢

We have created a program that fully integrates classroom education and professional training to prepare students for the active engagement necessary to devise solutions for global technical challenges. This training allows students to develop into technical leaders of the global world. In addition, our customized curriculum further facilitates student growth, providing them with the knowledge and ability to cultivate their interests and pursue long-term career development in various fields such as business, management, and medicine.

"Our program takes place over 4 semesters and 10 courses for a total of 30 credits.

Of these 10 courses, 8 are technical courses and 2 are industry preparation courses. Each course is worth 3 credits, and students are required to take additional language (English for non-native English speakers and non-English for others) and professional training courses (0 credits per course). Students are expected to spend their first year in China, complete a summer internship, and then
