High Performance Iris Recognition

Iris recognition has emerged as one of the most accurate and reliable biometric approaches for human identification. Based on computer vision and machine learning algorithms, this project is developing an automatic iris recognition algorithm that can be used over medium and long distances. The recognition algorithm also has high recognition accuracy in a non-ideal environment, and can accurately identify the user even in the case of the user wearing glasses, or if their illumination changes or signal noise. The recognition accuracy of the project algorithm on the international iris recognition database reaches the world's leading level.
